ABOUT ME

Hi, I am **5a6f4c41** , ahh never mind, I am self-taught guy from Belgrade and maybe you are interested in what's next.

My daily tools are **C**, **C++**, **Python**, **Assembly** but I also find my way around in **Java** and **PHP** (Interested in learning Laravel). As programmer I am bad at design but I can work with **HTML5**, **CSS3**, **JavaScript** for few slices of pizza.

I am interested in **Reverse Engineering**, that's why I have dual-boot. But my natural habitat is on **Linux**, I currently use my favorite distro **ArchLinux** with tiling manager, my best buddy is **neovim** and I use **git** very often. On Windows I use Notepad++ for programming and for cmd replacement I use cmder.

Also I am familiar with **networking**, **system administration** and **databases** i know how computers "whisper" over the wire in details. Currently I am student and I have no work experience in any software company but it doesn't mean i don't have some experience in programming, i have my own projects i need to finish and i will upload on my github account (**github.com/z01a**) . Until then you have to trust me that i know everything i mention above or call me on your interview and we can pull our 'keyboards' out.

I am also interested in black holes, space and science, i love puzzle movies and listen all kind of music. Besides the programming languages **Serbian** is my native language i also speak and write **English** and i am interested in learning **Russian** and **French**.

EDUCATION

School of Electrical Engineering, Belgrade - *Software Engineer*
OCT 2014 - MONTH 20XX

Mechanical and Traffic School, Cacak - *Mehanical tehnician for computer constructing*
